CARDIOLITE[®]

Kit for preparation of Technetium (99mTc) sestamibi injection

Active ingredient(s): *tetrakis(2-methoxyisobutylisonitrile) copper(1) tetrafluoroborate*

Consumer Medicine Information (CMI)

This leaflet provides important information about using Cardiolite[®]. **You should also speak to your doctor or pharmacist if you would like further information or if you have any concerns or questions about using Cardiolite[®].**

Where to find information in this leaflet:

- [1. Why am I using \[medicine name\]?](#)
- [2. What should I know before I use \[medicine name\]?](#)
- [3. What if I am taking other medicines?](#)
- [4. How do I use \[medicine name\]?](#)
- [5. What should I know while using \[medicine name\]?](#)
- [6. Are there any side effects?](#)
- [7. Product details](#)

1. Why am I using CARDIOLITE[®]?

Cardiolite[®] contains the active ingredient *tetrakis(2-methoxyisobutylisonitrile) copper(1) tetrafluoroborate*.

Cardiolite[®] is a prescription medicine which is only available to the Healthcare Practitioners for diagnostic use only. It belongs to a group of medicines called radiopharmaceutical agents, which are all radioactive. It is administered to you via intravenous injection after mixing with a radioactive solution.

Cardiolite[®] is used to show:

- The blood flow inside your heart during exercise and rest.
- The presence and size of any breast cancer.

Your doctor may have prescribed Cardiolite[®] for another purpose. Ask your doctor if you have any questions about why Cardiolite[®] has been prescribed for you. If you have any concerns, you should discuss these with your doctor.

2. What should I know before I use CARDIOLITE[®]?

Warnings

Do not use Cardiolite[®] if:

- You are **allergic** to any of the ingredients listed at the end of this leaflet.
- Always check the ingredients to make sure you can use this medicine.
- You are below 18 years old.** However, If your doctor believes it is necessary to give Cardiolite to you 18, he or she will discuss the benefits and risks with you.

Check with your doctor if you:

- Have any other medical conditions, especially if you have been told that you have or suspected of having a cardiac (heart) disease.
- Have allergies to ingredients listed at the end of this leaflet or any other substances such as foods, preservatives or dyes.
- Take any medicines for any other condition, including medicines that you buy without prescription from pharmacy, supermarket or health food shop.

During treatment, you may be at risk of developing certain side effects. It is important you understand these risks and how to monitor for them. See additional information under Section [6. Are there any side effects?](#)

Pregnancy and breastfeeding

Tell your doctor if you are pregnant or intend to become pregnant.

Like most medicines Cardiolite[®] is not recommended for use during pregnancy. If there is a need to consider Cardiolite[®] during your pregnancy, your doctor will discuss the benefits and risks of giving it to you.

Talk to your doctor if you are breastfeeding or intend to breastfeed.

Like most medicines Cardiolite[®] is not recommended while you are breastfeeding. However if you are breastfeeding, formula feedings should be substituted for breastfeeding for 24 hours following the administration of Cardiolite[®]. Breast milk produced within that time should be discarded.

3. What if I am taking other medicines?

Tell your doctor or pharmacist if you are taking any other medicines, including any medicines, vitamins or supplements that you buy without a prescription from your pharmacy, supermarket or health food shop.

Check with your doctor or pharmacist if you are not sure about what medicines, vitamins or supplements you are taking and if these affect Cardiolite®.

4. How do I use CARDIOLITE®?

How much to take / use

- Your doctor will decide how much you will be given CARDIOLITE®. This depends on your condition and other factors, such as weight.
- If you are being given CARDIOLITE® for heart imaging you may be given two injections, one at rest and one with exercise. You may be asked to fast for 4 hours before the procedure, and may be given a light meal after the injection.
- If you are being given CARDIOLITE® for breast imaging you will be given one injection.
- CARDIOLITE® will only be given to you by a doctor or a nurse.

When to take / use CARDIOLITE®

- Cardiolite may cause dizziness some people. Make sure you know how you react to Cardiolite before you drive a car, operate machinery or do anything else that could be dangerous if you are dizzy.

Do not drive or operate machinery until you know how Cardiolite affects you.

If you take too much CARDIOLITE®

If you think that you have been injected with too much CARDIOLITE®, drink plenty of water or fluid for frequent urination. This will remove as much radioactivity as possible from your bladder.

If you experience immediate side effects, you may need urgent medical attention. **You should immediately:**

- phone the Poisons Information Centre (by calling 13 11 26), or
- contact your doctor, or
- go to the Emergency Department at your nearest hospital.

You should do this even if there are no signs of discomfort or poisoning.

5. What should I know while using CARDIOLITE®?

Things you should do

Tell your doctor as soon as possible if you do not feel well during the injection or after being given CARDIOLITE®.

All medicines have side effects. Sometimes they are serious, most of the time they are not. You may need medical treatment if you get some side effects.

Tell your doctor or nurse if you experience any of the following and they worry you

- headache
- flushing
- nausea
- altered taste
- pain/inflammation at the injection site
- sleep disorders (such as nightmares, sleep terror or sleepwalking)
- breast pain (for women who had breast imaging)
- transient arthritis
- oedema
- dry mouth
- fatigue

These are usually mild and resolve within 15 minutes.

You must drink about 2 litres of fluid and void urine frequently immediately after the procedure. This will remove as much radioactivity as possible from your bladder.

Things you should not do

Do not take any other medicines until advised by your doctor.

6. Are there any side effects?

All medicines can have side effects. If you do experience any side effects, most of them are minor and temporary. However, some side effects may need medical attention.

See the information below and, if you need to, ask your doctor or pharmacist if you have any further questions about side effects.

Less serious side effects
