What Finasteride Mylan 5 is used for

Finasteride Mylan 5 is for use by men only.

Finasteride Mylan 5 is used to treat a medical condition in men called benign prostatic hyperplasia or BPH. BPH is a condition where your prostate gland (which is near your bladder) has become bigger making it more difficult for you to pass urine.

This can lead to symptoms such as:

- Weak or interrupted stream of urine.
- Feeling that you cannot empty your bladder completely.
- A delay before you start to pass urine.
- Needing to pass urine often, especially at night.

- Feeling that you must pass urine right away.

BPH occurs only in men and is common over the age of 50 years. In some men, BPH can lead to serious problems, including urinary tract infections and the sudden inability to pass urine at all. BPH can also lead to the need for surgery such as procedures to improve the flow of urine.

The prostate gland takes years to grow. Therefore, the symptoms of BPH take a long time to develop. Finasteride Mylan 5 works by slowly reducing the size of your prostate gland. This may lead to gradual improvement in your urine flow and other symptoms over several months. Finasteride Mylan 5 also helps reduce the risk of developing a sudden inability to pass urine (acute urinary retention) and the need for surgery. This may happen whether or not you notice any improvement or change in your symptoms.

Your doctor may have prescribed Finasteride Mylan 5 for another reason. Ask your doctor if you have any questions about why Finasteride Mylan 5 has been prescribed for you.

Finasteride Mylan 5 is not addictive.

The usual dose in men is one tablet taken once each day.

How to take it

Swallow Finasteride Mylan 5 with a glass of water.

When to take it

Take Finasteride Mylan 5 once a day at about the same time each day.

This will help you to remember to take the tablets.

It does not matter if you take Finasteride Mylan 5 before or after food.

How long to take it

If it is almost time for your next dose, skip the dose you missed and take your next dose when you are meant to. Otherwise, take it as soon as you remember, and then go back to taking your tablet as you would normally.

If you are not sure whether to skip the dose, talk to your doctor or pharmacist.

Do not take a double dose to make up for the dose that you missed.

If you have trouble remembering to take your tablets, ask your pharmacist for some hints.

If you take too much (overdose)

Immediately telephone your doctor or Poisons Information Centre (telephone 13 11 26) for advice, if you think that you or anyone else may have taken too much Finasteride Mylan 5. Do this even if there are no signs of discomfort or poisoning.

Things you must do

Go to your doctor for regular checkups, including a physical check for prostate cancer once a year if you are over 50.

While BPH is not cancer and does not lead to cancer, the two conditions can exist at the same time. Finasteride Mylan 5 is used for BPH not prostate cancer.

If you are having a blood test to measure your PSA (prostate-specific antigen) levels, tell your doctor you are taking Finasteride Mylan 5.

Finasteride Mylan 5 can affect the results of this test.

If you are about to be started on any new medicine tell your doctor and pharmacist that you are taking Finasteride Mylan 5.

Things you must not do

Do not give Finasteride Mylan 5 to anyone else, even if they have the same condition as you.

Side effects

Sometimes they are serious, most of the time they are not. You may need medical treatment if you get some of the side effects.

- Less desire for sex.
- Changes or problems with ejaculation, such as decreased amount of semen released during sex (this decrease does not appear to interfere with normal sexual function).

These are the more common side effects of Finasteride Mylan 5. For the most part these have been mild. In some cases, these side effects disappeared while the patient continued to take Finasteride Mylan 5. If symptoms persisted, they usually resolved on stopping the tablets.

Tell your doctor immediately if you notice any of the following:

- Breast swelling and/or tenderness.
- Breast lumps, pain or discharge from the nipples.
- Skin rash, itchiness.
- Hives or nettle rash (pinkish, itchy swellings on the skin).
- Testicle pain.

These are uncommon side effects that have been reported with Finasteride Mylan 5.

Tell your doctor immediately or go to accident and emergency at your nearest hospital if the following happens:

- Swelling of the lips or face.

These may be symptoms of a serious allergic reaction to Finasteride Mylan 5, which may cause difficulty in swallowing or breathing. You may need urgent medical attention. Serious side effects are rare.

Other side effects not listed above may also occur in some patients. Tell your doctor if you notice any other effects.

Do not be alarmed by this list of possible side effects. You may not experience any of them.
